

**INTEGRATING TECHNOLOGY,
METHODS AND PEOPLE,
FOR QUALITY AND
SUSTAINABILITY**

Stellium's ALM and Test Management capabilities can help your company achieve high levels of quality for your product or service

**Enterprise Services
Quality Assurance TOOLS
ALM Services**

- Centralized repository of reusable test cases
 - Reusable reports with standard, best practice metrics
 - Testing made easy, controllable, traceable and reliable
- Methodology automation – common practice across the corporation
- Historical analysis, lessons learned, continuous improvement

Cost of testing activities is between 30-45% for a global SAP deployment project and around 80% for a migration project (Panorama ERP Reports 2008)

Over 50% of the organizations do not use a dedicated test management tool (Panaya survey)

Improving product and service quality, reducing costs, and collaborating with vendors are key elements of a successful effort that can be also used to describe revolutionary product sustainability efforts currently underway at some of the world's leading providers.

Test Management tools can facilitate standardization of best practices and methods – both traditional and Agile - and HP ALM (Quality Center) is the market's leading tool.
