

MORE was able to ramp their volumes to 100% within a span of just 4 days of going live with EWM.

One of Stellium's landmark success stories over the past year has been the first EWM Go-Live interfacing EWM with a non-SAP ERP, the first of its kind in this industry, a business with so many variants.

Aligned with Stellium's vision of Global Localization, we were able to create a single simplistic but flexible solution, catering to the needs of various businesses such as FMCG, FMCD, Staples, General Merchandising, Organic, Cold and Frozen products. We have imbibed confidence to such an extent that the client is extremely positive of going live in all 24 DCs within the 2nd quarter of the upcoming fiscal year.

“Having said all this, I would like to give a big shout out to the entire team who were the flagbearers for Stellium in the eyes of such a demanding client/project. Without the handwork, grit and determination shown by our team, such a project would have been just a pipedream, in the SAP world. The team has truly set an example for breaking the ECC-dependent myth of EWM, all the while making commendable inroads into the grocery retail industry. “

SAP EWM powered by the expertise of Stellium's brightest minds meant that, despite completely overhauling MORE's warehousing business by revamping their supply planning logic, to overall execution within their DCs, the implementation seemed effortless.

The transition was so seamless, that, in a brownfield warehouse of this complication, MORE was able to ramp their volumes to 100% within a meagre 4 days of going live with EWM. This was critical to maintain their business needs of achieving a near perfect Store Service Level (around 95%). The new planning logic was able to improve DC throughput without compromising Store Service Level, even by the most granular of margins. The value we add to our client does not just stop with their DC, where we have implemented our systems, since we cover the entire stretch of their business, scouting for improvement opportunities, wherever possible. This includes reducing the infamous long waiting times of their Store's billing queues by a sophisticated MRP tracking design.

"MORE has rewarded our handwork with their faith in us to incorporate of automation systems such as PTL/Sorters in their warehouses. We believe that this will be the start of a long and cherished partnership for both Stellium and MORE."
